

Script Video Submission v2

Durasi target **±2:50** · Narasi **English sederhana (level B1)** — kalimat pendek, tanpa jargon, gampang diucapkan · Arahan visual dalam Bahasa Indonesia · 14 Juli 2026

BEAT 1 Hook — pengalaman pribadi

0:00–0:25

VISUAL

Tunjukkan kerja manualnya. Dua jendela berdampingan: consent form (ICF) di kiri, study protocol di kanan; scroll bolak-balik, highlight pakai cursor. Alternatif: b-roll dokumen dicetak + stabilo.

NARASI (EN)

“I used to do this by hand. A consent form on one screen. The study protocol on the other. I checked every risk, every required point, line by line. One document took hours. And if I missed one risk, the study could be stopped. Slow. Tiring. So I built Citera.”

ALTERNATIF NARASI (ID) — KALAU PAKAI SUARA SENDIRI

“Dulu saya kerjakan ini manual. Consent form di satu layar, study protocol di layar satunya. Saya cek setiap risiko, setiap poin wajib, baris demi baris. Satu dokumen bisa berjam-jam. Kalau satu risiko kelewat, studinya bisa dihentikan. Lambat dan melelahkan. Jadi saya bangun Citera.”

BEAT 2 Intro

0:25–0:40

VISUAL

Logo Citera → cut ke Playground. Kartu tagline di layar: “*Claude proposes. Citera verifies.*” — teksnya boleh tetap begitu; narasinya yang plain.

NARASI (EN)

“This is Citera. Claude writes the words. Citera checks them. You don’t have to trust the AI — Citera shows you the proof, for every rule.”

BEAT 3 Review berjalan

0:40–1:05

VISUAL

Klik sample study ONC-450 → **Run Review** → matrix terisi live (jangan di-cut, ini momen paling sinematik). Tiga baris merah/kuning naik ke atas.

NARASI (EN)

“Upload your protocol and your consent form — or just use a sample. Citera checks the document against every rule. Here, the FDA rules for consent forms. In about a minute, you see every problem — the worst ones on top.”

BEAT 4 Bukti, bukan opini

1:05–1:35

VISUAL

Klik baris **Conflicting** → dokumen scroll + highlight kalimat; panel “*Document says*” vs “*Protocol says*” (contoh “well tolerated” vs risiko liver 3% tampil di sini). Lalu klik baris **Not found** → panel pencarian yang hasilnya nol. Tutup dengan scroll cepat Audit Replay.

NARASI (EN)

“Every quote is real. Citera finds the exact sentence in your document. If the sentence is not there, the result is thrown away — you never see a fake quote. If something is missing, Citera shows you what it searched for, and that it found nothing. And every step is saved, so you can always check how an answer was made.”

BEAT 5 Perbaiki lewat Claude MCP — jantung submission

1:35–2:05

VISUAL

Claude Desktop/Code dengan MCP citera **nyata — jangan mockup**. Prompt: “*Fix the risks section.*” Claude nulis → `verify_revision` → **Rejected** (tunjukkan!) → Claude revisi → **Verified** → `prepare_submission`: “**Submission Ready**”.

NARASI (EN)

“A failed rule is not the end. Inside Claude, you ask for a fix. Claude writes new text. Citera checks it. Not good enough? Claude tries again. Good? The problem is marked as fixed — and the old result stays on record. Step by step, until the document is ready to submit.”

BEAT 6 Manusia yang menutup

2:05–2:35

VISUAL

Halaman Report — stage Review 1→2→3, klik **Concur/Override**, “**Add finding**”, lalu klik “**Stamp as Verified**” → stamp hijau muncul. Cut singkat: sample BPOM, findings berbahasa Indonesia.

NARASI (EN)

“The last word is still human. Reviewers check the results in rounds — Review one, two, three. They can agree, disagree, or add a problem the AI missed. Everything is recorded. When all rounds are done, the review gets its Verified stamp. And it’s not only English — an Indonesian consent form is checked with Indonesian rules, and the answers come back in Bahasa Indonesia.”

VISUAL

Diagram arsitektur satu layar → kartu tagline.

NARASI (EN)

“One engine. Use it in the browser, from the API, or inside Claude — the answers are always the same. Citera. Don’t trust the model. Verify the evidence.”

Checklist sebelum rekam

- `make clean-data` & `make seed` persis sebelum rekaman — state deterministik, histori bersih.
- Tanpa `ANTHROPIC_API_KEY`, evaluator scripted jalan — hasil identik setiap take, nol risiko demo. Beat 5 (MCP) tetap pakai Claude sungguhan.
- Buka tab yang dibutuhkan sebelum rekam: Playground, review ONC-450, Report page, Claude Desktop dengan MCP citera aktif.
- Beat 3: biarkan matrix terisi real-time — jangan dipercepat.
- Kalau durasi kepanjangan: pangkas Beat 3 duluan; Beat 4–5–6 adalah cerita pembedanya, jangan disentuh.

Kenapa struktur ini

- **Hook personal** — kamu cerita masalah yang kamu alami sendiri; langsung kredibel di 25 detik pertama.
- **60 detik pertama sudah “wow”** — matrix terisi live + kutipan terverifikasi.
- **MCP sebagai klimaks** — bagian paling relevan untuk penilai: tulis → cek → revisi → siap submit.
- **Workflow + BPOM sebagai pembeda** — review berlapis oleh manusia, stamp digital, dan dukungan Bahasa Indonesia.

“Don’t trust the model. Verify the evidence.”
