

Script Video Submission

Durasi target **±2:50** · Narasi **English** (voice-over) · Arahan visual dalam Bahasa Indonesia · Final draft — 14 Juli 2026

BEAT 1

Hook — pengalaman pribadi

0:00–0:25

VISUAL

Bukan Claude Desktop — tunjukkan pekerjaan manualnya. Dua layar/jendela berdampingan: ICF di kiri, study protocol di kanan; scroll bolak-balik, highlight manual pakai cursor. Alternatif: b-roll dokumen dicetak + stabilo.

NARASI (EN)

“I’ve done this by hand: a consent form on one screen, the study protocol on the other — cross-checking every risk statement, every required element, line by line. It takes hours for a single document. And if you miss one understated risk, that’s not a typo — a study can get suspended. Slow, manual, and it doesn’t scale. That’s why I built Citera.”

ALTERNATIF NARASI (ID) — KALAU PAKAI SUARA SENDIRI

“Saya pernah mengerjakan ini manual: consent form di satu layar, study protocol di layar satunya — mencocokkan setiap pernyataan risiko, setiap elemen wajib, baris demi baris. Satu dokumen bisa berjam-jam. Dan kalau satu risiko yang ditulis terlalu halus kelewat, itu bukan salah ketik — studinya bisa disuspensi. Lambat, manual, dan tidak scalable. Karena itu saya bangun Citera.”

BEAT 2

Intro

0:25–0:40

VISUAL

Logo Citera → cut ke Playground. Kartu tagline: “*Claude proposes. Citera verifies.*” Transisi dari Beat 1 mulus: kalimat “That’s why I built Citera” langsung disambut logo, tanpa jeda.

NARASI (EN)

“Citera is clinical regulatory intelligence. Claude proposes — Citera verifies. It doesn’t ask you to trust the AI; it proves, with evidence, whether a document satisfies each regulatory requirement.”

BEAT 3 Review berjalan

0:40–1:05

VISUAL

Klik sample study **ONC-450** → **Run Review** → matrix terisi live (polling 1,2 detik itu cinematic — jangan di-cut). Tiga baris merah/kuning naik ke atas.

NARASI (EN)

“Upload a protocol and a consent form — or load a sample. Citera evaluates every requirement of the ruleset — here, FDA 21 CFR 50.25 — and returns findings, not opinions. Three problems, ranked by severity.”

BEAT 4 Evidence First

1:05–1:35

VISUAL

Klik baris **Conflicting** → dokumen scroll + highlight quote; panel “*Document says*” vs “*Protocol says*” (di sinilah contoh “well tolerated” vs liver toxicity 3% tampil — penonton melihat buktinya). Lalu klik baris **Not found** → panel evidence-of-absence. Tutup dengan scroll cepat Audit Replay (prompt monospace).

NARASI (EN)

“Every quote is verified byte-for-byte against the source document — a quote that can’t be located is rejected, never shown. When something is *missing*, Citera shows how hard it looked: the exact queries, zero matches. Absence, with evidence. And every step — retrieval, the exact prompt, the grounding — lives in an append-only audit log you can replay.”

BEAT 5 Verification Loop di Claude MCP — jantung submission

1:35–2:05

VISUAL

Claude Desktop/Code dengan MCP citera **sunnguhan** — **jangan mockup**. Prompt: “*Fix the risks section.*” Claude propose → `verify_revision` → **Rejected** (tunjukkan!) → Claude revisi → **Verified** → `prepare_submission`: “**Submission Ready**”.

NARASI (EN)

“Failing requirements aren’t dead ends. Through MCP, Claude drafts replacement language and Citera verifies it with the same judgment path. Rejected? Claude revises. Verified? The finding is resolved as an explicit verified revision — the original review stays immutable. Until: Submission Ready.”

BEAT 6 Manusia yang menutup

2:05–2:35

VISUAL

Halaman Report — stage Review 1→2→3, klik **Concur/Override**, “Add finding”, lalu klik “Stamp as Verified” → stamp hijau muncul. Cut singkat: sample BPOM, findings berbahasa Indonesia.

NARASI (EN)

“The final word belongs to humans. Reviewers work in staged passes — concur, override, or add findings the engine missed; every action lands in the audit trail. When every stage is complete, the review earns its digital Verified stamp. And regulation isn’t only English — run an Indonesian consent form against BPOM’s guideline, and Citera reviews it *in Bahasa Indonesia*.”

BEAT 7 Close

2:35–2:50

VISUAL

Diagram arsitektur satu layar → kartu tagline.

NARASI (EN)

“One engine — Playground, REST API, SDK, Claude MCP — every surface returns identical, evidence-backed findings. Citera. Don’t trust the model. Verify the evidence.”

Checklist sebelum rekam

- `make clean-data && make seed` persis sebelum rekaman — state deterministik, histori bersih.
- Tanpa `ANTHR0PIC_API_KEY`, evaluator scripted jalan — hasil identik setiap take, nol risiko demo. Beat 5 (MCP) tetap pakai Claude sungguhan.
- Buka tab yang dibutuhkan sebelum rekam: Playground, review ONC-450, Report page, Claude Desktop dengan MCP citera aktif.
- Beat 3: biarkan matrix terisi real-time — itu momen paling sinematik; jangan dipercepat.
- Kalau durasi kepanjangan: pangkas Beat 3 (upload flow) duluan; Beat 4–5–6 adalah cerita diferensiasinya, jangan disentuh.

Kenapa struktur ini

- **Hook personal** — bukti paham masalah dari lapangan, bukan dari paper; langsung kredibel di 25 detik pertama.
- **60 detik pertama sudah “wow”** — matrix live + quote terverifikasi, sebelum penonton sempat bosan.
- **MCP sebagai klimaks** — bagian paling relevan untuk juri Claude: loop propose → verify → revise → Submission Ready.
- **Workflow + BPOM sebagai pembeda** — “production thinking” (audit trail, digital stamp, i18n) yang jarang dimiliki peserta lain.

“Don’t trust the model. Verify the evidence.”
